

Background

At MSBit, we develop web and mobile software, IT infrastructure, corporate portals and both desktop and mobile applications. We make use of a range of Microsoft technologies, such as ASP.NET MVC, MOSS, SQL Server and Win Forms and others. We also specialize in developing Java solutions: JEE, JME, and PHP solutions tailored to the specific needs and available infrastructure of each customer. With the aim of providing customers with end-to-end solutions, our UI Design department produces solutions that are technologically correct as well as easy to use and practical.

MSBit provides the following services:

- » Specification of software solution architectures, based on customer requirements.
- » Development of software solutions using a variety of technologies and Agile methodologies.
- » Integration with legacy software systems.
- » Assistance for software projects and development teams, including training in new technologies and methodology assimilation.
- » UI design studio.

Technology

- » SQL server, ASP.NET web forms, Silverlight & MVC, Win forms, MOSS
- » JEE, JME, Spring, Hibernate, MVC frameworks
- » PHP, Drupal, Joomla, Symfony
- » Oracle DB, MySQL DB, SQL server
- » Android SDK, iPhone SDK
- » Mobile open source rendering engines

What sets us apart

The company was set up by former employees of some of the largest, leading companies in this field and therefore makes use of the most advanced development methodologies and management tools.

In order to give our customers control over the entire development process, we work with Agile methodology, allowing customers to view development output at each stage, thereby reducing uncertainty and improving product quality. We are proud of our ability to meet deadlines, satisfy quality requirements and achieve customer satisfaction.

Representative Clients

We deliver outsourced services with an in-house attitude!
